The Reading in Aphasia Study at GSU is looking for healthy adults to participate in a study looking to better understand how the brain functions during reading.

Qualifications:
- Male or female, ages 18 to 89
- Native English speaker
- Right handed
- Struggling or typical reader (reading will be screened to see if you qualify)
- No permanent metal in or on body
- No pacemaker, cochlear impact, permanent hearing aid
- Not claustrophobic
- Healthy (no heart or neurological diseases, history of seizures, other organ failure, sickle cell anemia, high or low blood pressure, no history of stroke)

Study Includes:
- Reading and language-related tests lasting up to 3 hours per session (can be completed online).
- Scanning session including an fMRI lasting no more than 3 hours.
- Reading and fMRI sessions will take place at GSU/GT Center for Advanced Brain Imaging over the course of 2 visits on different days.
- Total participation time is up to 6 hours over 2 different days. Each session is expected to take approximately 2-3 hours.

Receive up to $65, based on number of sessions completed (minimum $15)
